**PATEL KRISHIL A. (CE-101) (19CEUOG147)**

**B.Tech CE Semester-IV**  
**Subject: Software Project**

**Guided by:**

**Prof. Brijesh S. Bhatt**  
**Prof. Pinkal C. Chauhan**  
**Prof. Jigar M. Pandya**

**Faculty of Technology Department of Computer Engineering**  
**Dharmsinh Desai University**

**Faculty of Technology Department of Computer Engineering  
Dharmsinh Desai University**

## **CERTIFICATE**

This is to certify that the practical / term work carried out in the subject of  
**Software Project** and recorded in this journal is the  
bonafide work of

**PRAJAPATI NISARG N. (CE-110) (19CEUOS111)  
PATEL YASH K. (CE-107) (19CEUON068)  
PATEL KRISHIL A. (CE-101) (19CEUOG147)**

of B.Tech semester **IV** in the branch of **Computer Engineering**  
during the academic year **2020-2021**.

# 1 Introduction

---

## **1.1 Brief Introduction**

"Friend Book" is an online chatting platform. The user can communicate with many other user in various geographical locations.

This type of system are also used in huge company for their employee to Communicate among the teammates and other teams also.

## **1.1 Tools/Technologies Used**

### **Technologies:**

- Django
- Django Rest Framework
- HTML
- Python
- DBsqlite

### **Tools**

- Git
- Visual Studio Code

### **Platform**

Local development server

## 2 Software Requirement Specifications

---

### **2.1** **System Functional Requirements**

#### R1 Authentication

##### R1.1 Registration

Description: If user is new, it gets register himself with Name, Username, email address and password.

Input: Valid e-mail address and strong password.

Output: Account created and redirected to next screen.

##### R1.2 Login

Description: User should login through registered e-mail id.

Input: Username and password

Output: Successfully login redirected to chat screen.

## R2 Messaging

### R2.1 Convey a message

Description: The registered person should be able to send and receive instant message to/from any user on his/her Friend's list given in user panel.

Input: Message to be send.

Output: Message is displayed on the right side on sender's chat box and left side on receiver's end.

### R2.2 Deliver Attachments

Description: The person should be able to send or receive videos, documents, audios, images to another user.

Input: Videos, documents, audios, images

Output: Attachments is displayed on the right side on sender's chat box and left side on receiver's end.

### R2.3 Group Message

Description: It allow the user to create group of peoples to talk together within the group and share the attachments.

Input: Videos, documents, audios, images

Output: Attachments is displayed on the right side on sender's chat box and left side on receiver's end.

## R3 Manage Users

### R3.1 Block User

Description: The admin can block the targeted user in case of any misbehavior, or abusive language.

### R3.2 Search User

Description: User can search by username/name of other users.

Input: Name of user

Output: List of user found on screen

### R3.3 Friend request

Description: User can send friend request after searching by clicking on username. It will be automatically accepted.

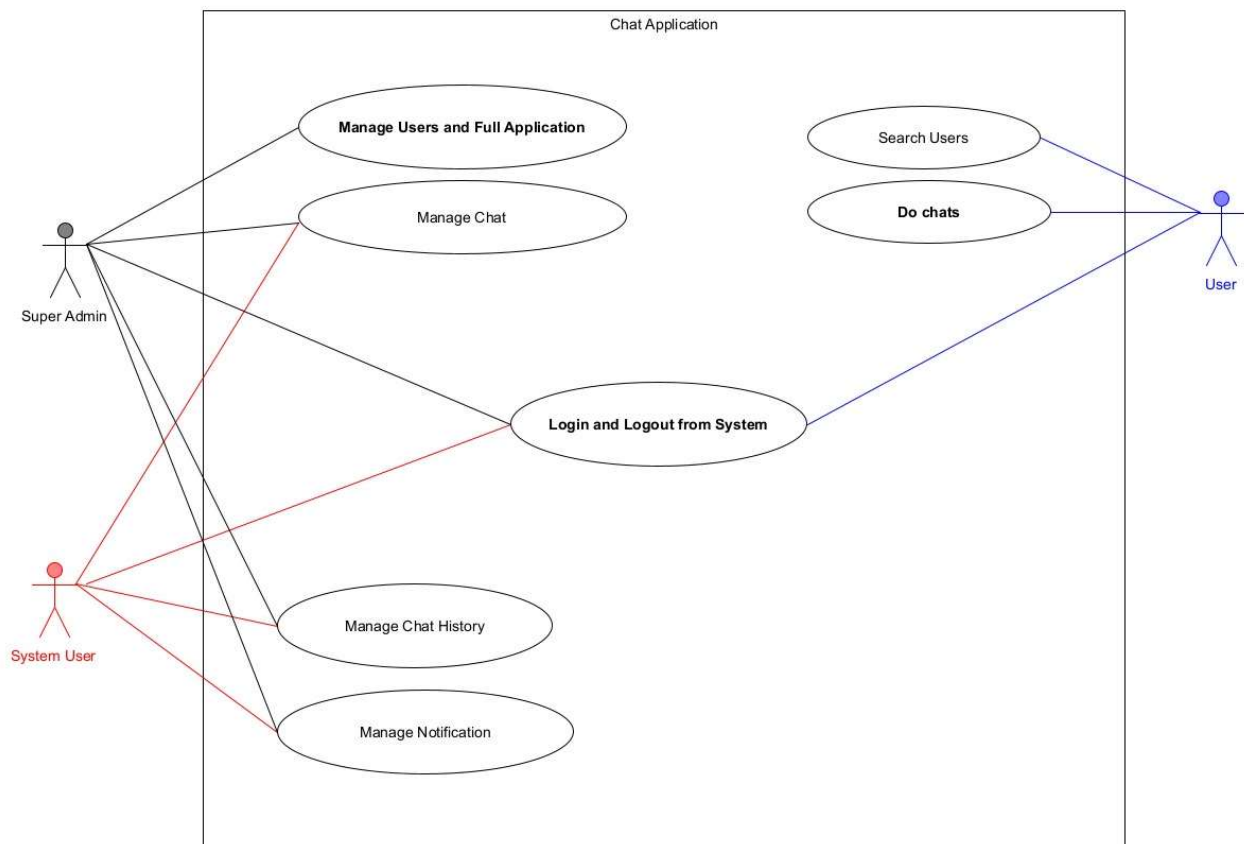

Input: Name of user or nothing

Output: User will be added to friend's list.

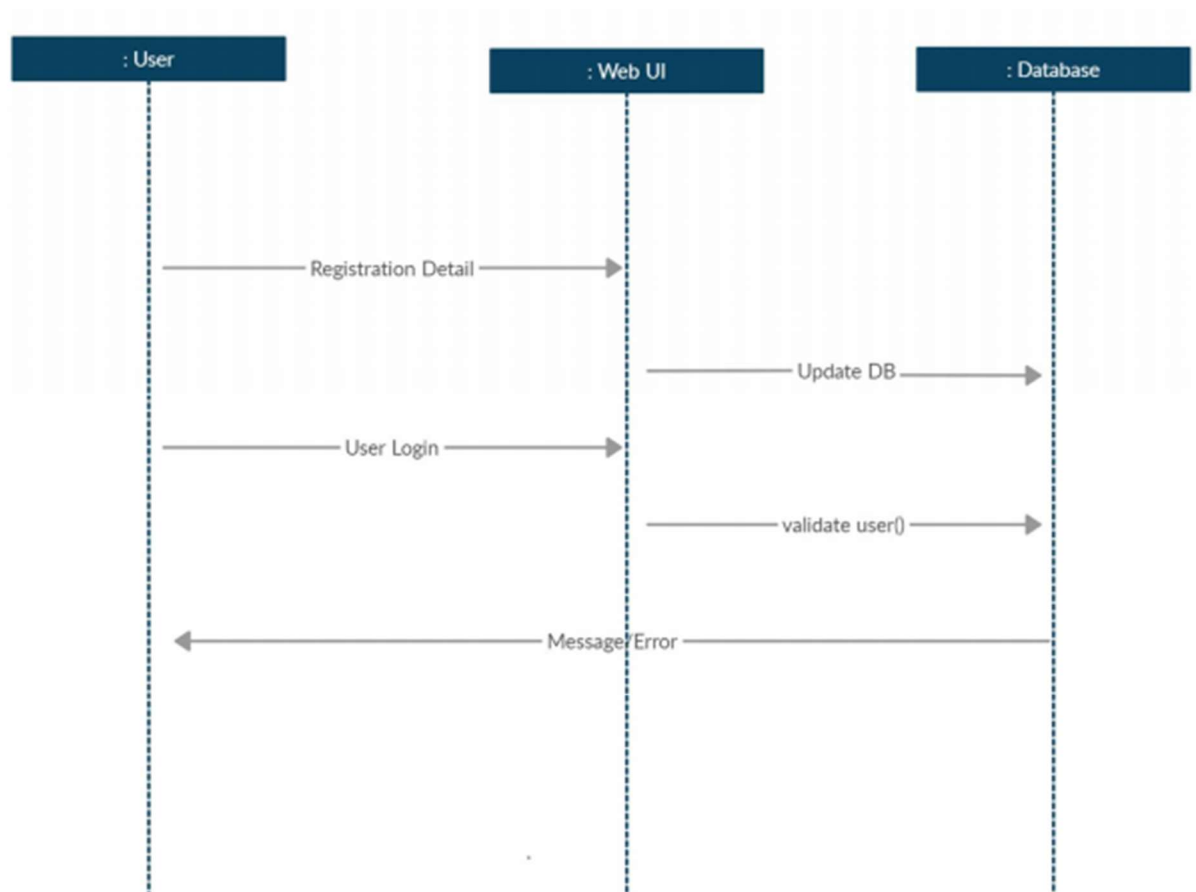

## 3. Design

### 3.1 Use Case Diagram

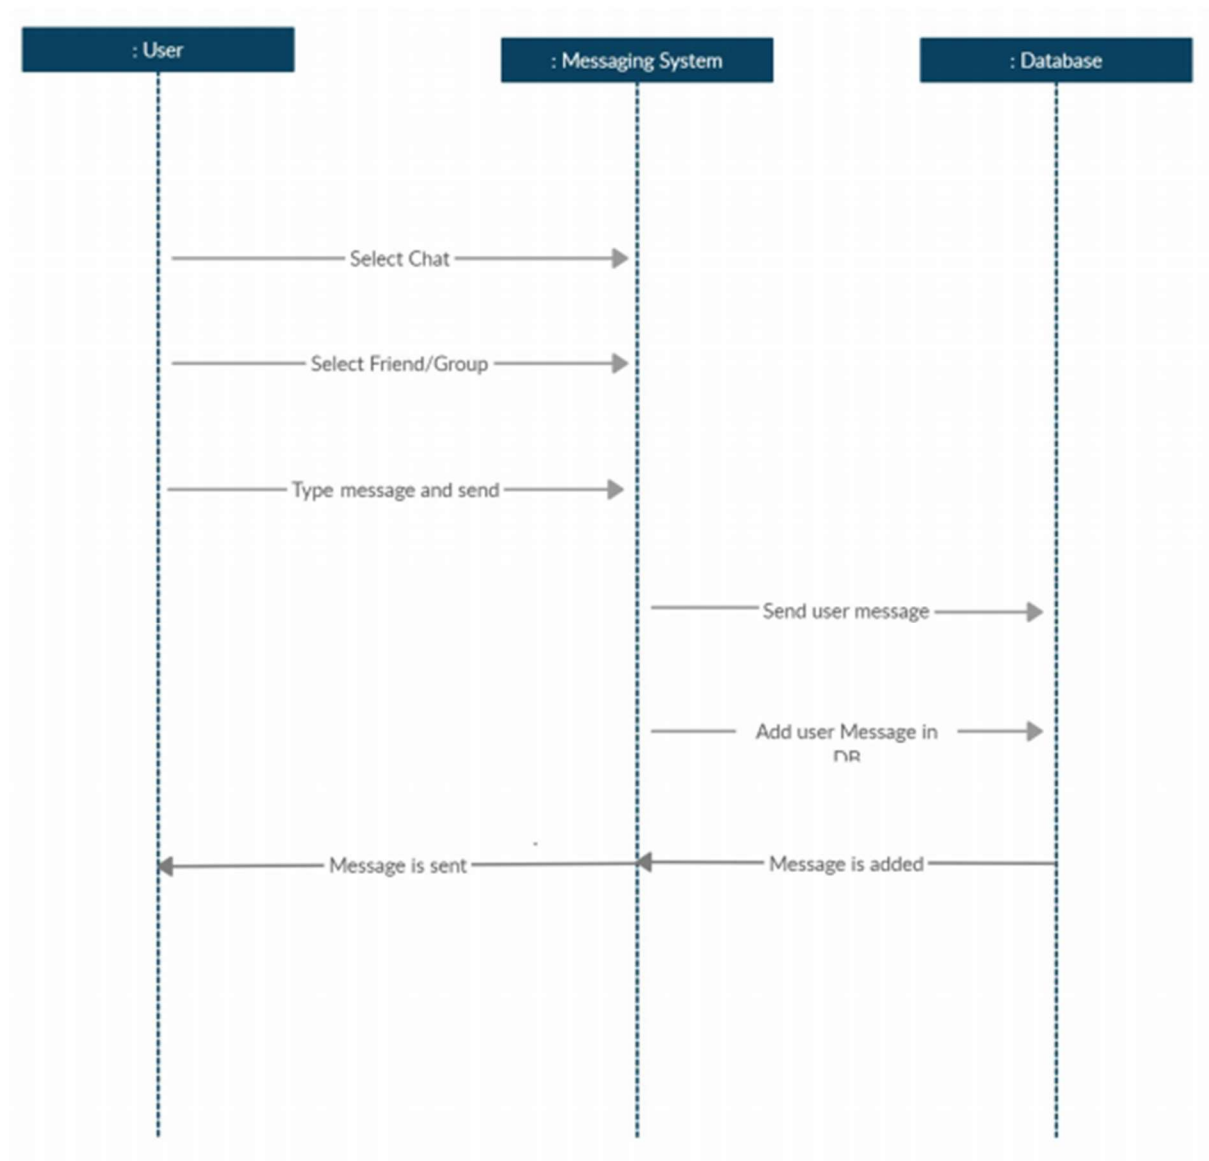

**Use case diagram of users**

### 3.2 Sequence Diagram

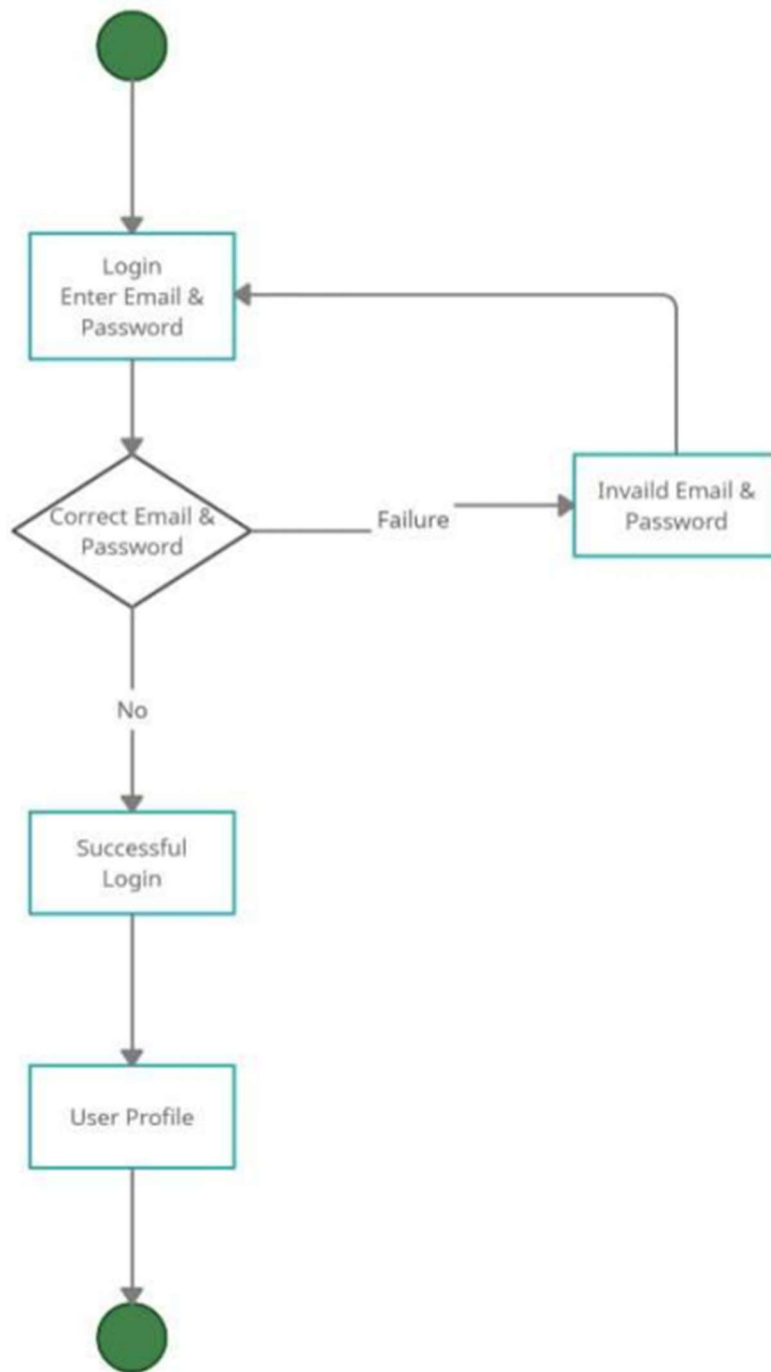

**Sequence Diagram of Login/Signup**

## 3.2 Sequence Diagram

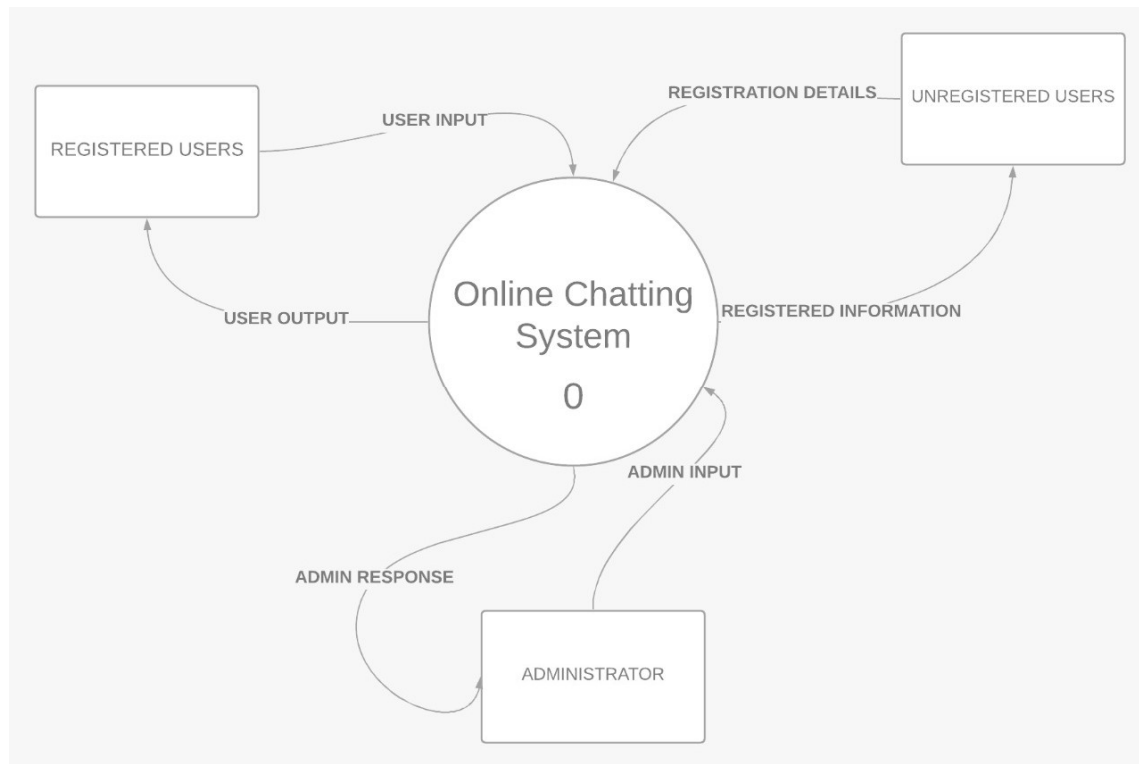

**Sequence Diagram of Messaging**

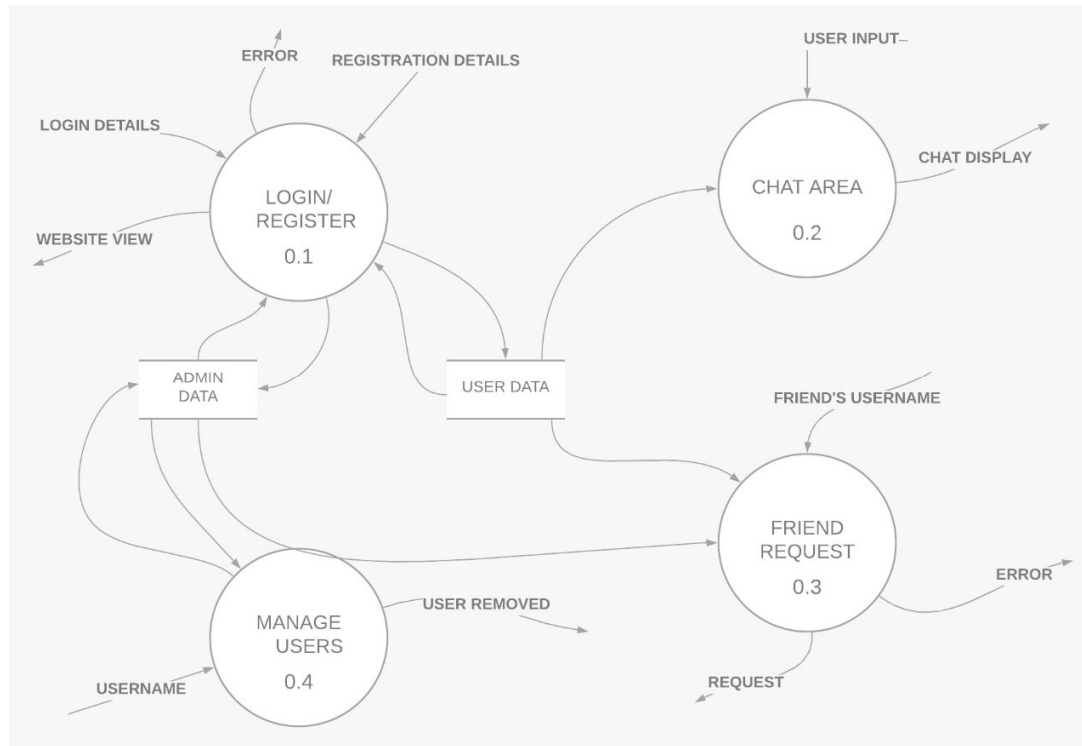

### 3.3 Activity Diagram

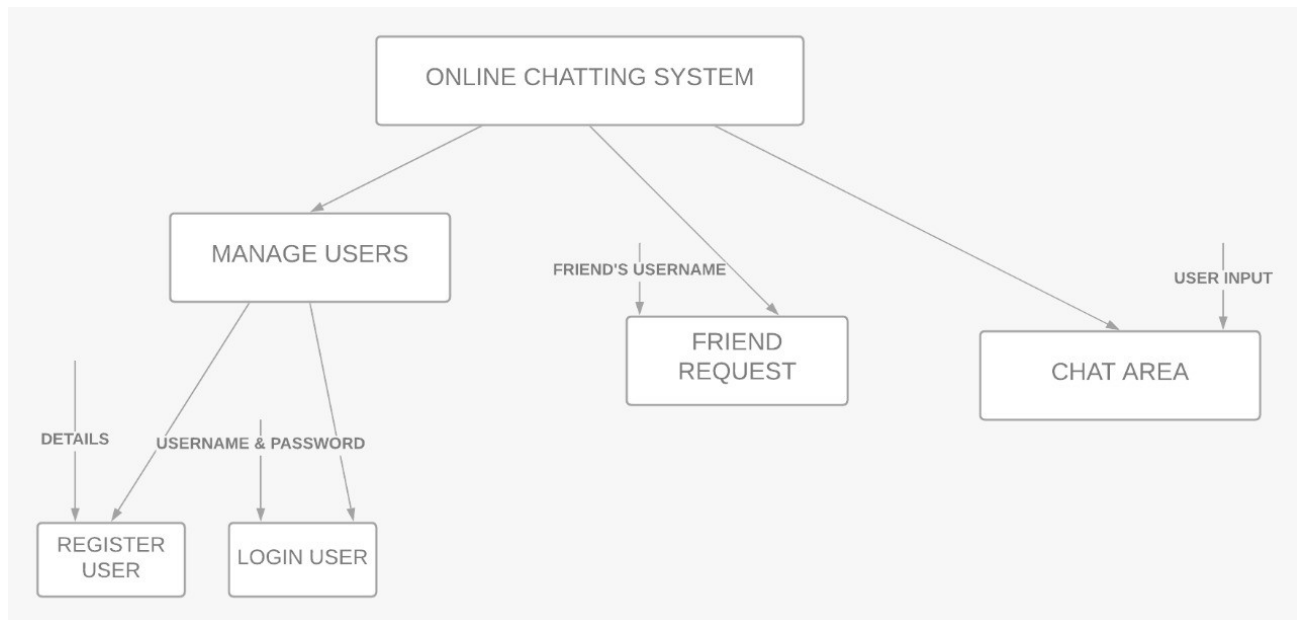

Activity Diagram of Login

### **3.4Data Flow**

### 3.5 Structure Chart

## 4. Implementation Details

---

### **4.1 Description of Modules**

#### **1. Registration Module**

Basic information of user taken by system and stored in database. When user is try to login in system , system authenticate to user and then user entered in system.

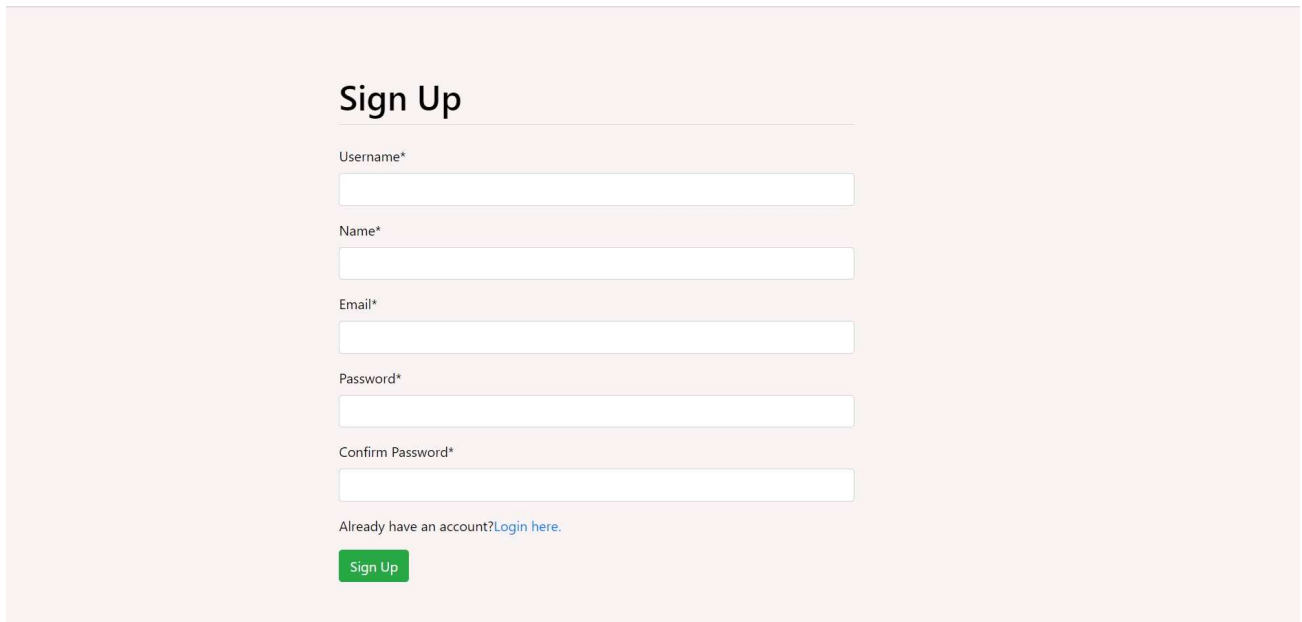

#### **2. Chat Module**

When user want to chat with some friends in friend's list system allows user to chat and also add new friends my search feature.

## 5 Screenshots

---

A screenshot of a web form titled "Sign Up" on a light pink background. The form contains five input fields: Username\*, Name\*, Email\*, Password\*, and Confirm Password\*. Below the fields is a link "Already have an account? Login here." and a green "Sign Up" button.

**Sign Up**

Username\*

Name\*

Email\*

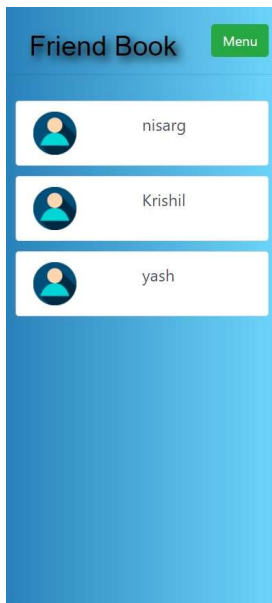

Password\*

Confirm Password\*

Already have an account? [Login here.](#)

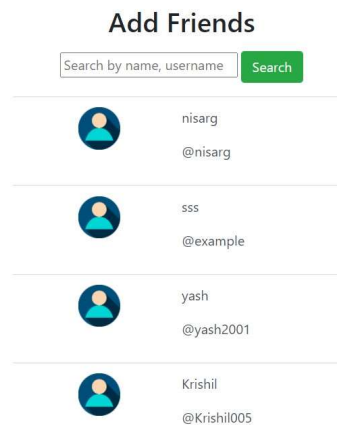

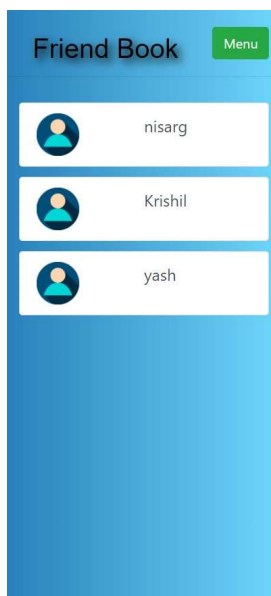

Sign Up

### Signup-page

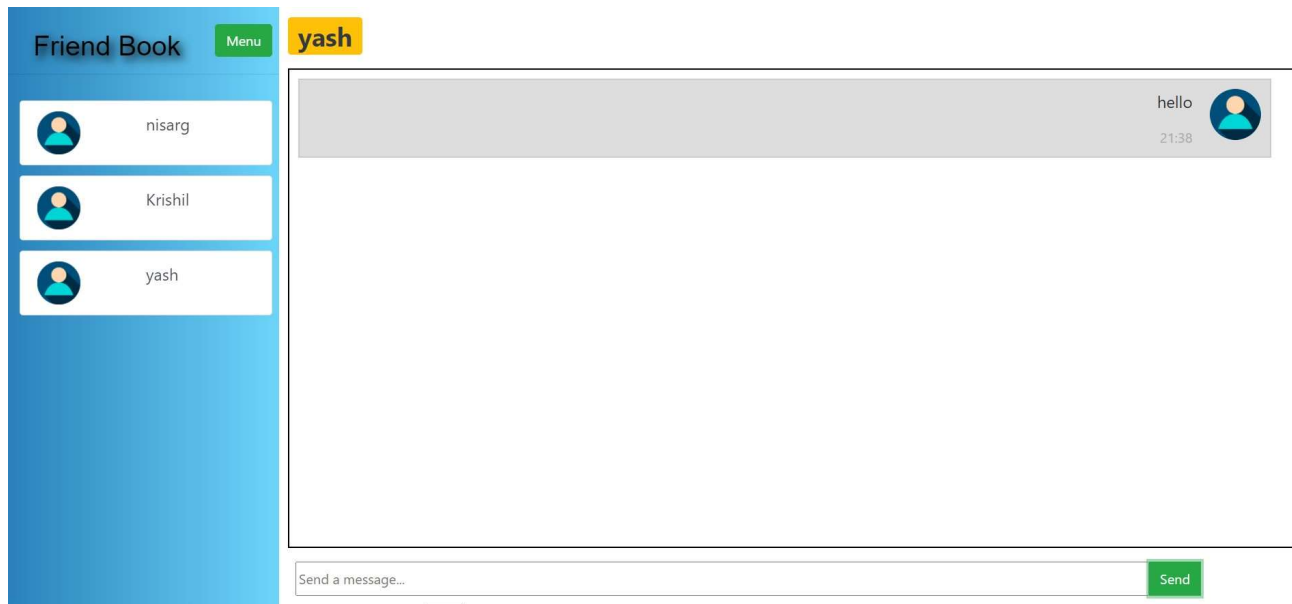

Select a chat & start messaging!

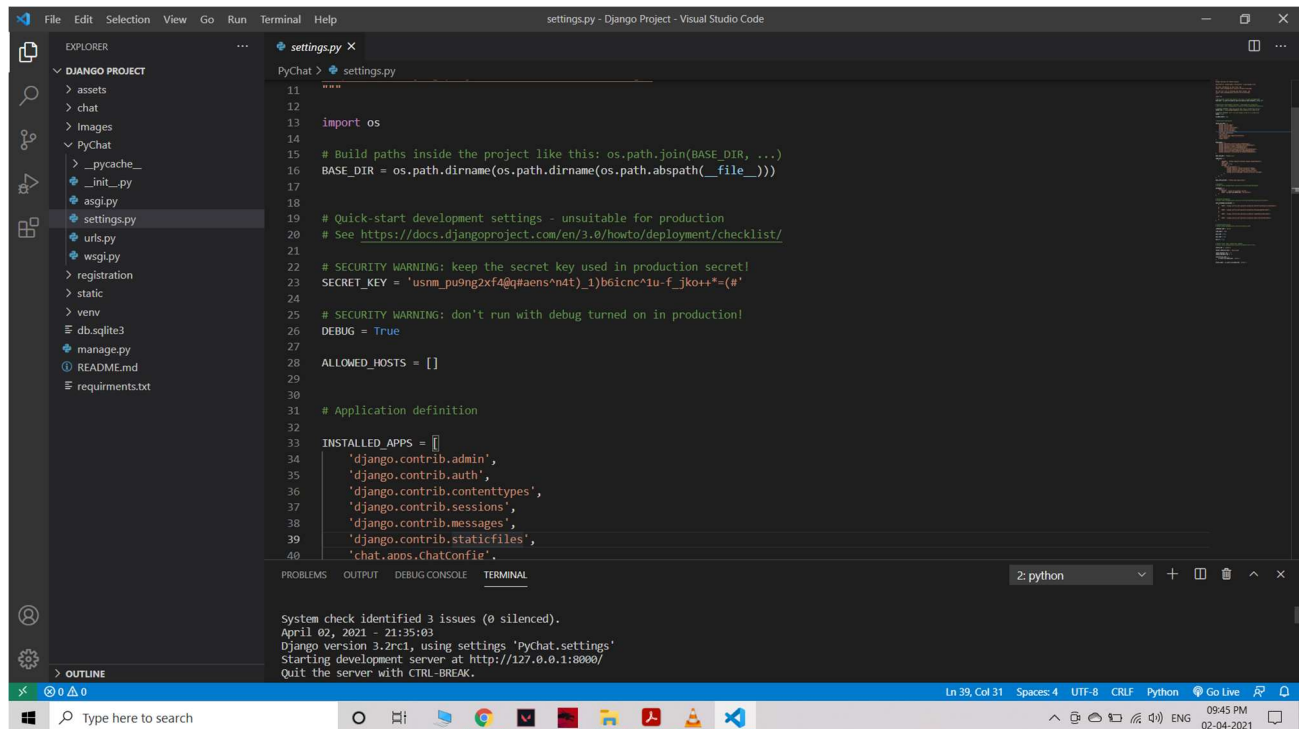

## Main User Interface

## Search For Friends

## Messaging Area

## TESTING LOCALHOST

## 6 Conclusion

---

Functionalities that are successfully implemented in the system are:

- a. User registration containing all the necessary validation on field
- b. Login
- c. User authentication
- d. Logout
- e. Sending Message
- f. Search a Friends

## 7 Limitations and Future Enhancements

---

We are able to implement the functionality model of the “Friend Book”. We aim to make this product ready to be used.

In future we can make user interface little bit better and fast ,we can add Social login, Add Group chat, User Profile Feature ,and remove some bugs mention above.
